

POWERTEST200 MULTIFUNCTION TESTER

The PowerTest 200 multifunction tester has been designed to meet the complex requirements of electricians, with safety features and an easy to use interface that also makes it a great choice for those new to installation testing.

Features:

- Voltage measurement up to 440V
- Continuity test with autostart and null facility to zero out lead resistance
- Insulation resistance measurement with 250, 500 & 1000V test voltages
- RCD testing: Trip time, trip current (0.5, 1, 2 and 5 times the rating, dependent on device), auto test and ramp test
- Test RCDs in auto mode and simply recall the test results once finished
- Loop impedance and PSC or PFC readings can be shown on one screen
- Non-trip loop impedance
- Loop impedance - high current with auto start and direct readout of PSC
- Phase rotation test will indicate the correct phase sequence
- Integrated socket probe for easier testing

Kit Contains:

Padded neck strap, professional carry case, mains lead, 1.2m black, red & green test leads, black, red & green crocodile clips, remote probe with test buttons, 6 x mn1500 (LR6) (AA) 1.5V batteries, spare 1.6A 1000V HRC FF fuse & user manual
